Earnings & age

Average earnings rise in line with an architect's age although earnings peak at age xx to xx. The pattern is inconsistent from age xx onwards, although in general average earnings fall back with increasing age.

Peak earnings are recorded this year at age xx to xx for Sole Principals (but small sample size) although for Principals in Partnership and in-house architects the peak is earlier, at age xx to xx. Overall, the peak at xx to xx is new this year; usually, earnings peak at the next age group, xx to xx.

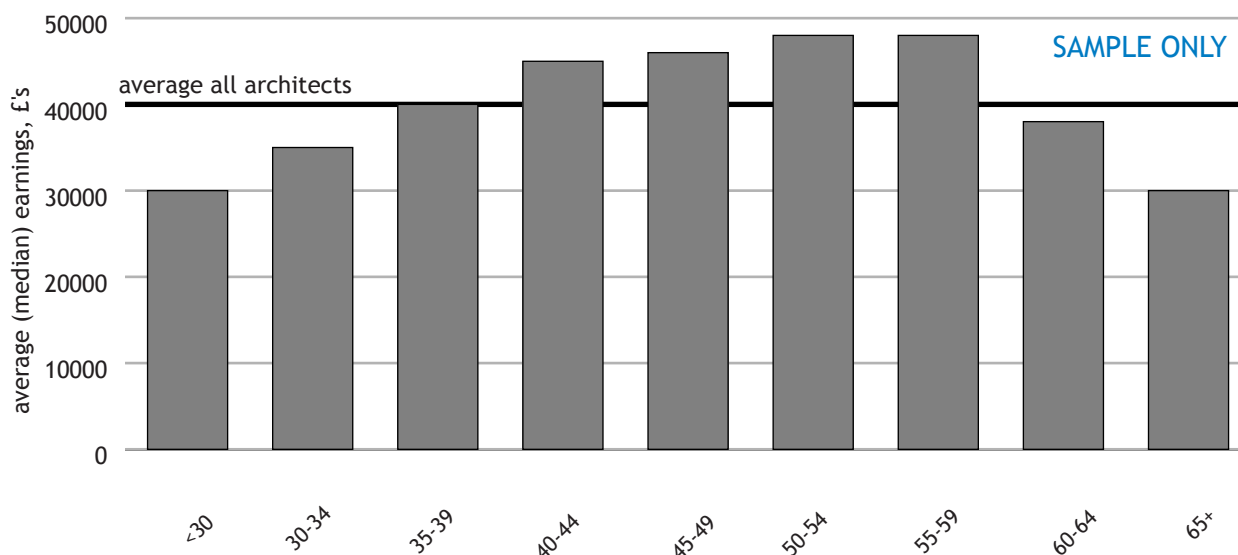

Chart 3-7 shows how the earnings of different cohorts of architects have changed over time - for an 'average' architect aged 35, 45, 55 and 65 in 2013. Those who are now aged xx appear to have performed best over the long-term (although dipped this year), while since 2003 an architect now aged xx appears to have recorded higher average earnings than someone now aged xx.

TABLE 3-5
Architects' median earnings by age and field of employment, 2013

Fringe benefits received

The most frequently received fringe benefits are subscription to the RIBA and ARB (received by xx and xx per cent respectively). xx per cent receive a contributory pension, and xx per cent a non-contributory pension - implying that two thirds of architects receive no pension benefit at all. Public sector architects are most likely to receive a contributory pension; just xx per cent of Sole Principals receive a pension.

A company car is provided to xx per cent of architects, another xx per cent receive a mileage allowance. Highest company car provision is amongst private in-house architects (xx per cent). xx per cent of architects receive life insurance, while xx per cent receive medical insurance. The highest value of pensions goes to architects in the public sector.

TABLE 5-1
